Always On

The "Always On" installation will project unencrypted network activity of network users. In this system, detailed profiles of users (seen below) are periodically shown. A profile shows recent images and websites accessed by the user. When a profile is not being shown, a list of phones active on the network is displayed (shown above). This system was built and installed before at Steirischer Herbst and the underlying system is utilized for the Anonymous P. theater production.

Setup

Alternatives

1. Main projection
   Shows phone list and periodically shows profiles. The phone list is sorted by entropy level.

2. Alternate projection
   Perhaps in the café space the same screen could be more permanent. The café is where attendees commonly linger and would become more aware of the system.

Requirements

0. Setup required regardless of Setup
   i.   "Monitor port" on the main network switch that all wireless routers feed into.
   ii. Network cable connection for display laptop

1. Main projection
   i.   1 or 2 projectors
   ii. Wifi router for "hot zone". Location tracking has been tested with the common Unifi wireless routers (~250eu) but existing routers may also work.

2. Alternate projection
   i.   1 projector

Technician would bring one laptop to sit next to and connect to monitor port and another laptop for display to main projection.
